

# We simply train surgeons

## OUR REASON

The evolution of surgery constantly requires the inclusion of new approaches and new devices that allow for constant renewal, not only of the elements of surgery, but also of its very definition. Thus, the surgery of the future, hand in hand with innovation, must become part of a structural alteration of the surgical continuous education processes, because of the gap between the creation of new approaches and procedures, the technical advances in devices, the HCP learning curve, and the adoption curve.

“See one, do one, teach one”, based on face-to-face, work-based learning, **is not currently sustainable** due to the regulation of the labor framework for surgical professionals in terms of working hours, as well as due to the need to take knowledge to every corner of the planet.

Teaching is currently based more on observation, initial experience, interaction, reflection, and finally action. Much more ambitiously, our goal is the direct transfer of skills through suitable digital training/learning systems.

## OUR VISION

**TELL ME AND I FORGET.  
TEACH ME AND I MAY REMEMBER.  
INVOLVE ME AND I LEARN.**

*Benjamin Franklin*

Universal access to excellent lifelong surgical training/learning shouldn't be exclusive to a few privileged people. Surgery has advanced more in the last 15 years than in the previous 150, and only 3% of healthcare professionals in the world can keep up to date (due to time, money and other restrictions).

At AIS we believe in facilitating free remote access to excellent surgical contents (synchronous or on demand) provided by the best international surgeons. This is the starting point to rewrite the rules of training and learning through the use of tools that combine technology and innovation. We believe in democratizing surgical and medical knowledge!

**Dr. Antonio M. De Lacy**  
Founder of AIS

## OUR MISSION

To work tirelessly on the audiovisual and technical recording and broadcasting of procedures, techniques and innovations, from a constantly growing network of hospitals and KOLs and validated by academic and scientific institutions, with the aim of offering it to everyone who needs it in the most technologically and effective way possible.

# OUR ARGUMENTS

- **5 billion** people are unable to access surgical care (Lancet Apr 2015).
- **143 million** more surgeries needed actually (Lancet Apr 2015).
- **19 million** annual deaths that are preventable by surgery (Lancet Apr 2015).
- Approximately 97% of world surgeons are unable to attend face-to-face congresses.
- The complication rates and mortality rates of surgeons with low skills are **3 times** and **5 times** higher, respectively, than those of highly skilled surgeons. (Birkmeyer et al, NEJM Oct 2013).
- The the operative time and readmission rate of inexperienced surgeons are **2.5 times** and **6 times**, respectively, those of experienced surgeons (CAVA Robotics).
- The regulatory framework is becoming increasingly stringent and device manufacturers have issues training surgeons from around the world in the use of their innovations.

# OUR COMMITMENT

What if the solution were to understand all the players' existing needs on behalf of all the players involved and use technological layers as enablers and facilitators of knowledge flows, scientific and academic validation and real-time critical thinking?

This is the reason why AIS was created: a strong commitment to merging the forces of the best surgeons (KOLs) in the world, **surgical societies**, prestigious hospitals, health systems, foundations, universities, freelance academics and industry players (medical device and supply companies) that are aligned with our philosophy, purpose and vision: to close the gaps in surgical training and learning.

# OUR DAILY CHALLENGES

## ADVANCES IN SURGERY MUST:

- Reduce the number of surgeons who have no access to quality ongoing training.
- Constantly create and maintain an international network of leading surgeons in their specialties who share the same mission and their associated hospitals, universities, foundations and societies.
- Create and maintain platforms to facilitate the transfer of knowledge and speed up the curve for the adoption of new tools, techniques, and procedures, and consolidate basic surgical and medical knowledge.
- Provide universal access (at no cost) to a library (in real time and on demand) of surgical learning and experiential contents, ranging from the basics to the latest procedures.
- Constantly innovate in formats and contents to keep our community engaged.
- Constantly explore new digital teaching methodologies and technologies.
- Cover everything from mass training to selective learning through the use of existing or self-developed technologies.

**As a result, improve patients' quality of life.**

# TODAY

Advances in Surgery is a global surgical and medical knowledge-transferring, **data-driven ecosystem**, comprising a set of digital correlative platforms, with the purpose of facilitating access to high-quality content created by the world's best specialists. Its goal is to accelerate the training/learning curve so as to close the gap between innovation and adoption, through the use of behavioral analysis, artificial intelligence, active listening, and adaptive learning management systems.

**SURGICAL JOURNEYS**  
SEASON 1

In collaboration with:

*Johnson & Johnson*  
INSTITUTE

The **Bariatric Surgical Journeys** are going to be a first-of-kind learning experience. For the first time, the journeys will be based on the learner, they will evolve and change based on the interests, experience and learning needs of each surgeon.

A huge amount of content will be published during three months. There, the best bariatric KOLs worldwide will share their knowledge in Virtual Broadcasts, Masterclasses, Webinars or Surgical Skills, within others.

And, as democratizers of education we are, these journeys are going to be **FREE**.

Launching:  
One big bariatric event per week

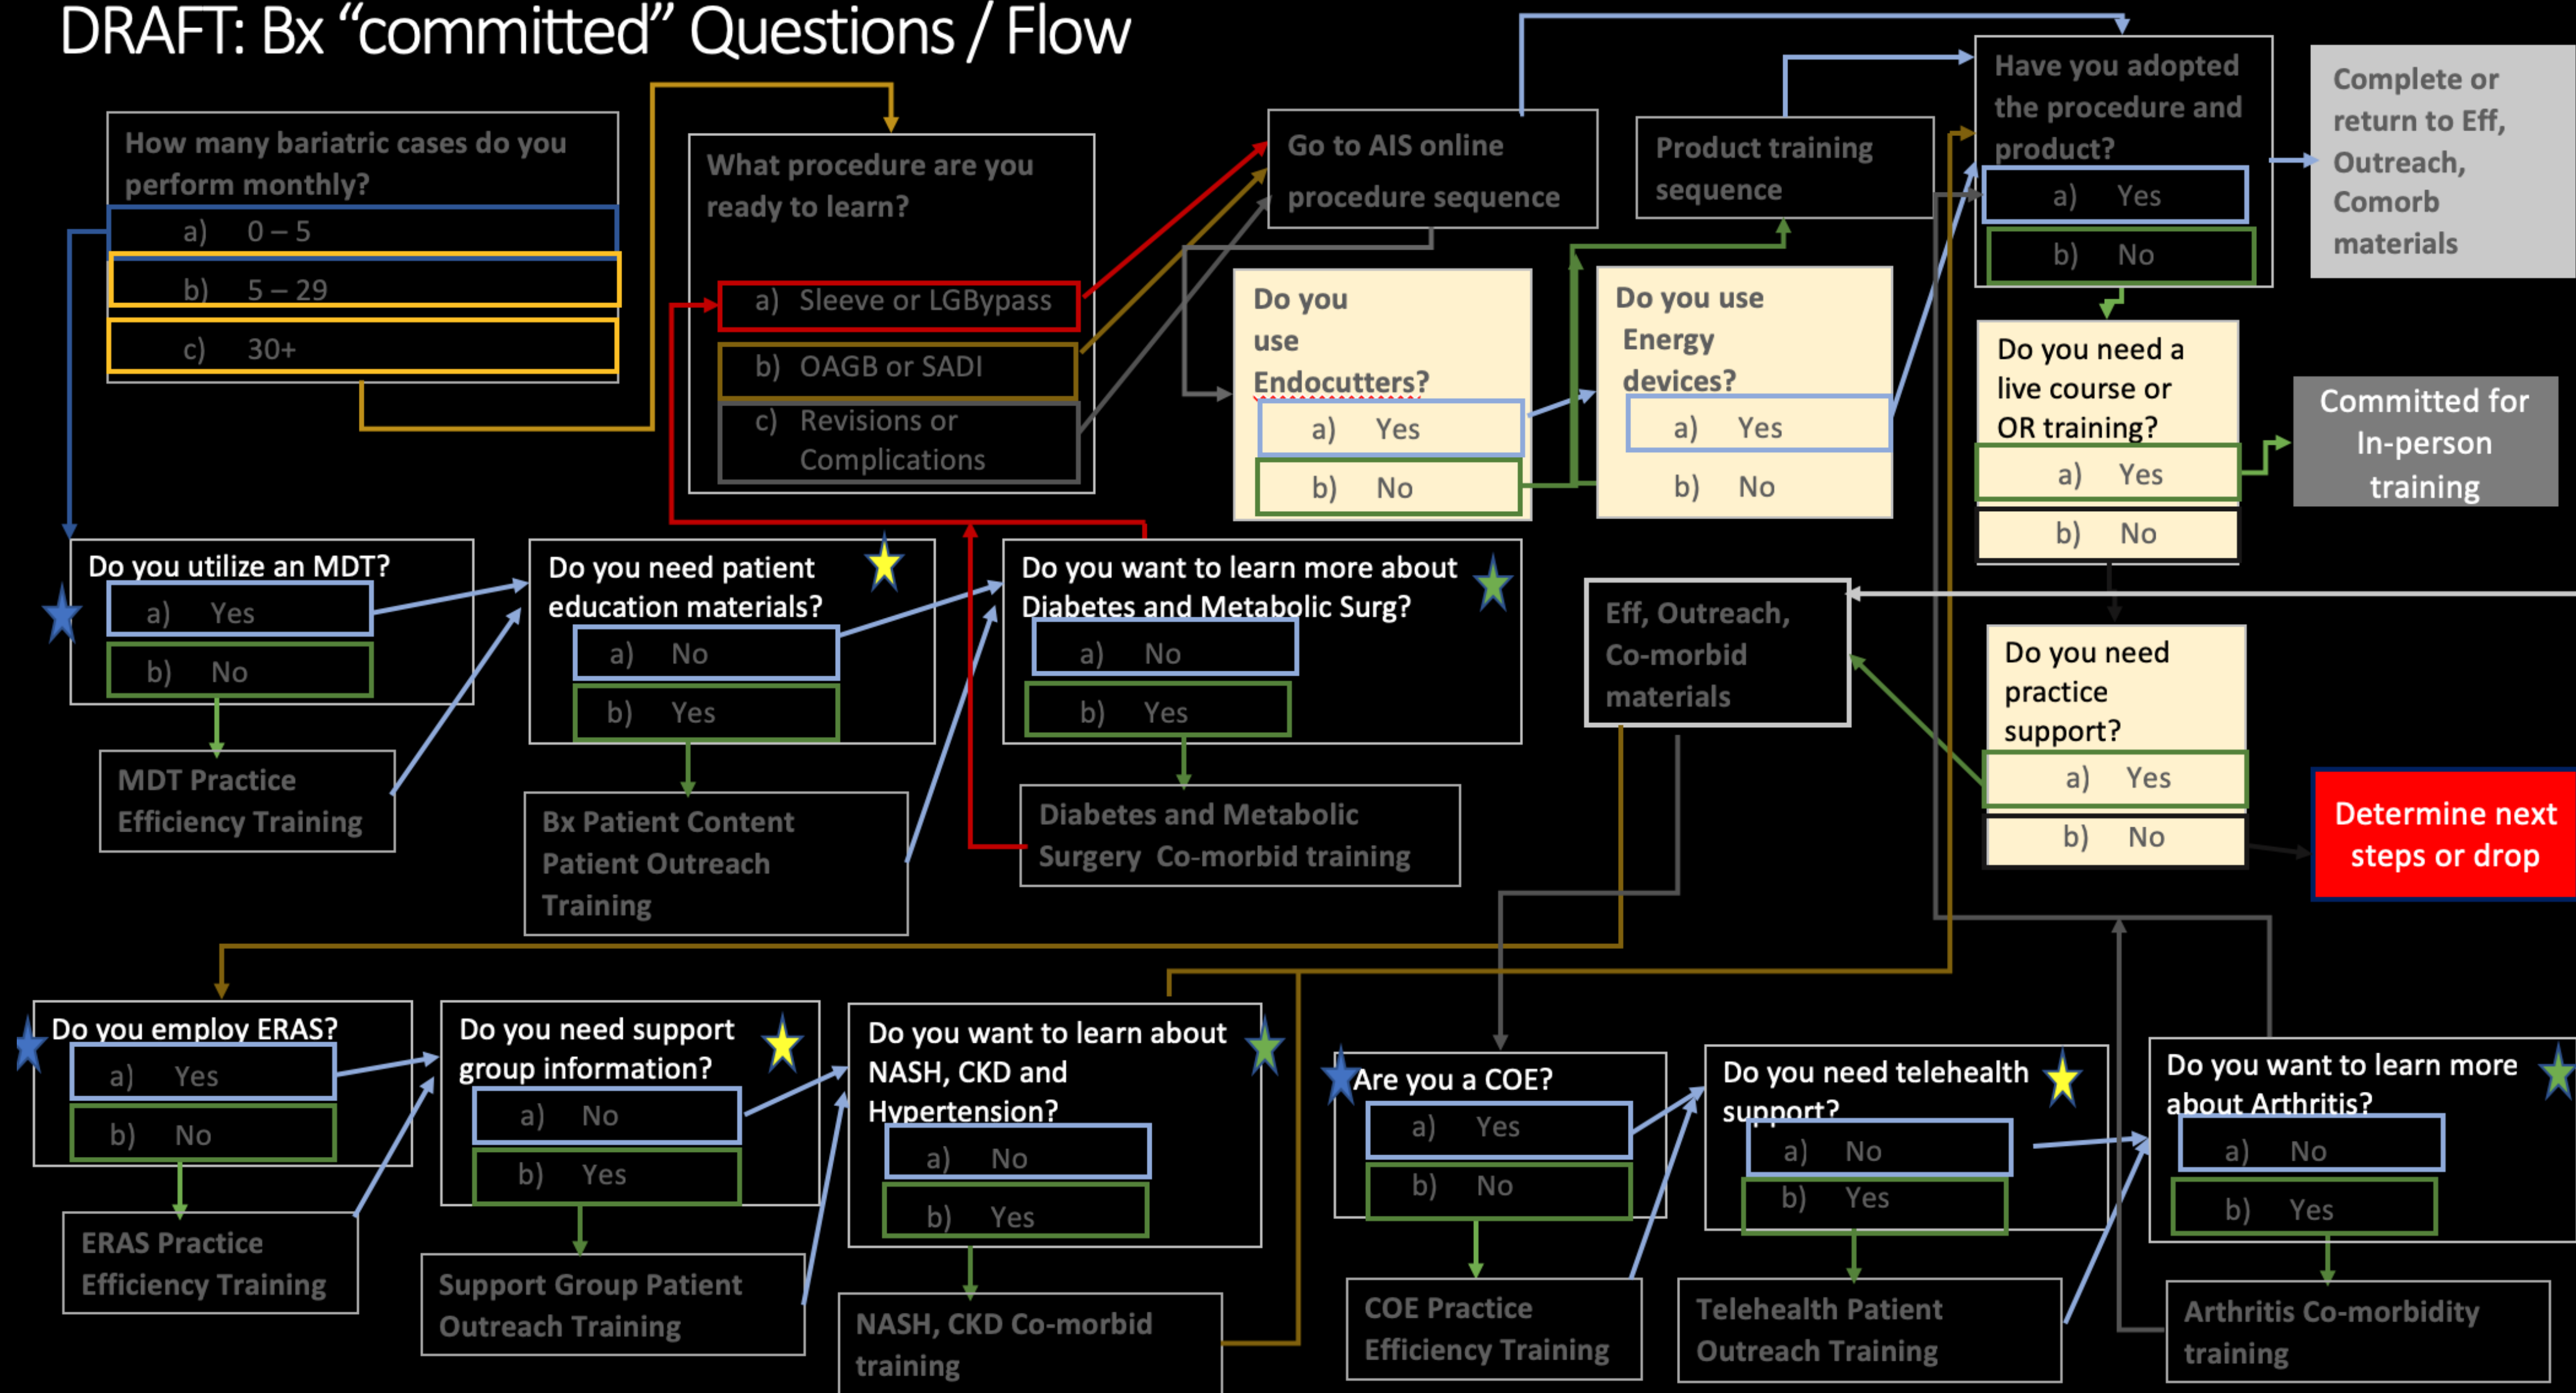

Constant launching of all the procedures:  
4 new contents per week

End...  
Of Bariatrics Season 1
